POLISH MANUFACTURER  
**OF ROBOTS AND AUTOMATIC**  
PAINT MACHINES

[www.unison.com.pl](http://www.unison.com.pl)

“

At UNISON, we are committed to the highest quality solutions.

Our ambition is to become a leader among manufacturers of painting machines and robots.

We aim to achieve this by prioritizing your needs and continuously improving our machines.

I believe that cooperation based on mutual trust and understanding is key to success.

Therefore, I invite you to get to know our company.

I am confident that the values we represent will meet your expectations

**Wiesław Jackiewicz**

CEO, UNISON Sp. z o.o.

**UNISON Sp. z o.o.**

We are a family business and the only Polish manufacturer of painting robots and machines, dryers, and additional equipment.

We design painting equipment tailored to the individual needs of each client.

Operating since 2000, our production hall is located in Cieplewo, near Gdansk.

We implement technology that reduces costs and increases the efficiency of painting processes.

## HOW WE WORK

We help you at every stage of our cooperation

01

### We make an appointment

We visit your business and get to know its painting processes.

We discuss your needs, assess the problems you face and gather as much information as possible about the specifics of your business.

02

### You can see the effect of our solutions

We meet in our laboratory where we paint your components.

You learn about the process and evaluate the effect of our actions on a real product.

If you do not feel like participating in the entire process - send us your products.  
In either case, we want you to know the qualitative effect of our work.

03

### We prepare an offer

Based on the gathered information, the work of our technicians, and conducted tests, we select the optimal solution for your company.

We discuss all possible technologies and configure the best one.

At this stage, we also assist in obtaining financing. Our cooperation with leading banks provides you with preferential leasing conditions.

04

### We start the production of your machine

A team of engineers and designers works on implementing the selected technology into your machine.

During this time, we keep you constantly informed about the progress of your order.

05

### We install and implement

We deliver the machine to your company and the technical team takes care of the installation and system configuration.

06

### We provide training

We train future operators - theoretically and practically.

We teach your employees the day-to-day operation, the basics of maintenance and additional practices for efficient and trouble-free use.

07

### We provide after-sales support

We are constantly available to you - by phone and email.

When a fault occurs, our team of specialists will connect to your appliance remotely and repair the fault or come on site to carry out an inspection or repair.

**WE ADVISE**

## Take advantage of our experience

We want to ensure that our technology will work effectively in your company.

Therefore, we visit clients to assess potential, assist in selecting the right equipment, and arrange the layout in the production hall.

We also support you in obtaining financial assistance for equipment purchases. Thanks to our cooperation with major banks, our clients benefit from preferential leasing terms.

Additionally, we have extensive knowledge in painting itself.

We're happy to help you choose the appropriate paint, painting technique, and parameters for your production.

## Test the effectiveness of solutions on your own products

We have our own laboratory where we test various painting possibilities. We constantly look for areas of improvement that ultimately lead to even higher quality.

Our laboratory also serves for demonstrations. Visit us with your own elements for painting.

You'll not only see the final result but also understand the entire process.

This way, you'll be convinced that our solution is the right one for you!

Get to know us

**WE TRAIN**

## We prepare your employees

With the equipment, you gain access to our knowledge and experience.

We organize training—both theoretical and practical—either in our laboratory or at the client's production line.

The result is qualified operators, ready to work efficiently with the machines.

We minimize the likelihood of human error, thereby increasing the efficiency of the entire process.

**WE SUPPLY**

Everything you need in one place

We supply consumables not only for our machines but also for your operations.

We have a dedicated website where you can quickly and easily order necessary production items at preferential prices.

For owners of our machines, we have created a special user area.

Get to know us  
**SERVICE**

Always ready for your peace of mind

We provide full service support for our equipment.

Although malfunctions are very rare, our specialists are ready to respond quickly.

Most issues are resolved remotely, minimizing downtime.

In more serious cases, we come on-site to the client's location, regardless of where it is.

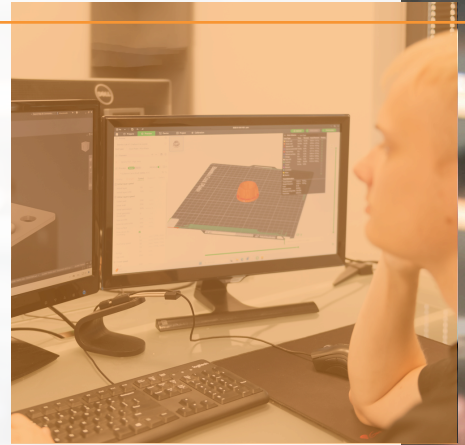

### Remote machine connection

In the case of an electronic malfunction, our experts connect to your machine, diagnose the issue, and resolve the problem.

This solution provides a real time-saving benefit and minimizes downtime.

### Connection via app

Using the camera on your phone or tablet, you show us the area of the issue in real time.

We can mark, point out, or draw the solution to the problem on the image you show us.

With such precise instructions, you can perform the necessary actions just like our technicians—without the need for them to visit on-site.

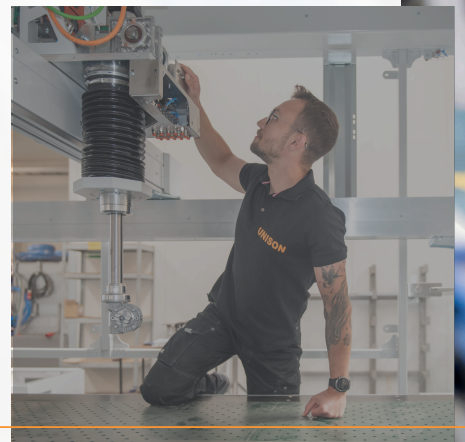

### Regular maintenance

We visit our clients not only in case of a malfunction – we regularly inspect our machines.

During maintenance, we replace components that are most susceptible to wear and tear.

This way, we minimize the risk of downtime to an absolute minimum.
